

FILTRATION UNIT

Experimental capabilities

- Decontamination of of hydraulic oil tanks
- Filtration of the fillings and oil extras in hydraulic plants

MMH100

Operating principle

The filtration group is an indispensable tool for all maintenance activities on industrial hydraulic installations

This equipment can be used alone or with other compatible equipment from our range (see last section of this document).

Technical details

1 set consisting of:

- 1 metallic chassis
- 1 motor pump group 0,7kW, 20L / min, max 5 bars
- 1 filter body spin on
- 2 filter cartridge 10 micron
- 2 connecting hoses
- 2 self-sealing couplings
